The Honourable Minister
the Federal Capital Territory Administration
Federal Capital Territory Administration, Area 11, Garki
Abuja, Nigeria

OFFER OF COMPLIMENTARY BETA ACCESS TO THE ECONOMICBRIDGE SATELLITE INTELLIGENCE PLATFORM FOR THE FEDERAL CAPITAL TERRITORY

Honourable Minister,

On behalf of **Bizra Farms Integrated Nigeria Limited**, I write to offer the the Federal Capital Territory Administration complimentary beta access to **EconomicBridge**, a satellite and artificial intelligence platform that gives the Federal Capital Territory's administration a live, local government level picture of what is happening on the ground across its territory.

EconomicBridge is live in production at **economicbridge.org** and draws on real data from the European Copernicus (Sentinel-1 and Sentinel-2) satellites, NASA, the World Bank and UNICEF. The platform may be opened and inspected directly; the overview requires no login. It is the subject of Nigerian patent application NG/PT/NC/O/2026/23780. We are pleased to offer this access to the Federal Capital Territory free of charge for an initial pilot period, covering all 6 Area Councils, so that your administration can evaluate its value firsthand. Beyond the pilot, we anticipate transitioning to a modest subscription arrangement by mutual agreement.

What the platform offers the Federal Capital Territory:

- **Farmland protection:** daily monitoring of every area council for land disturbance and encroachment, fusing Sentinel-1 radar surface change, Sentinel-2 vegetation loss, NASA fire detections and night light activity. A single signal raises a watch; corroborating signals raise an alert.
- **Crop health:** current vegetation condition for every area council from Sentinel-2, refreshed on the satellite's revisit cycle, so decline is visible without a field visit.
- **Rainfall early warning:** daily NASA rainfall monitoring against each area council's own historical distribution, flagging exceptional rainfall as a flood precursor. Thresholds are local, because a rainfall figure that is ordinary in one part of the country is extreme in another.
- **Poverty and population mapping:** settlement level population and poverty intensity from night light satellite data, so the Territory can direct budget and intervention where the need is greatest.
- **Education:** school access and connectivity mapping to target educational investment.
- **Economy:** income and cost of living tracking across the Territory.

What is still in development. We would rather state this plainly at the outset than have it discovered later. Two capabilities are built but not yet validated to our own standard: detection of flooding from

radar imagery, which we are currently testing against historical flood records before we will rely on it; and diagnosis of crop disease from a leaf photograph, which performs well on laboratory imagery but not yet on photographs taken in the field. Neither is presented as operational, and we will report on both as they progress.

the Federal Capital Territory's data would be visible only to your nominated team, fully isolated and secure, and aligned with the Nigeria Data Protection Act. The platform also delivers automated monthly reports, and can reach communities directly through multilingual SMS alerts in partnership with relevant agencies, including citizens without smartphones.

We would be honoured to give you or your nominated team a live demonstration at your convenience. Kindly nominate one or two officers as points of contact, and we will activate the Territory's account and provide guided onboarding immediately.

Please accept, Honourable Minister, the assurances of our highest regard.

Yours faithfully,

A handwritten signature in blue ink, appearing to read 'Abdullahi Zuru Ibrahim', with a stylized flourish at the end.
