Dr. Matthew Adepoju

Director-General & Chief Executive Officer

National Space Research and Development Agency (NASRDA)

Obasanjo Space Centre, Airport Road, Lugbe

Abuja, Nigeria

PROPOSAL FOR PARTNERSHIP: APPLYING EARTH OBSERVATION FOR AGRICULTURE, FOOD SECURITY AND DISASTER RESILIENCE, THROUGH A NIGERIAN-BUILT SATELLITE INTELLIGENCE PLATFORM

Dear Dr. Adepoju,

On behalf of **Bizra Farms Integrated Nigeria Limited**, I write with great enthusiasm to propose a partnership with the National Space Research and Development Agency. We are a Nigerian company that has built and deployed **EconomicBridge**, a satellite and artificial intelligence platform that turns Earth observation into real, on-the-ground impact for agriculture, food security and disaster response. In doing so, we believe we are helping to realise NASRDA's founding mandate: the application of space science and technology for the socio-economic benefit of our nation.

EconomicBridge is live today on secure cloud infrastructure, already covering more than 700 local government areas across Nigeria, Ghana and Senegal. It diagnoses crop disease using AI, detects floods and drought from satellite radar, predicts farmland conflict 24 to 72 hours ahead, and maps poverty and population from space, then delivers warnings to communities by SMS in their own languages. It currently draws on Copernicus, NASA, World Bank and UNICEF data, and is designed to scale to all 36 states and the FCT.

Why we are writing to NASRDA. A platform like this is exactly where Nigerian space capability should lead. We would be honoured to integrate NASRDA's own Earth-observation assets, including NigeriaSat imagery and the work of the National Centre for Remote Sensing, so that Nigerian satellite data visibly drives applications that protect Nigerian farmers and communities. Together we can demonstrate a homegrown success story: Nigerian data, Nigerian innovation, and measurable Nigerian impact.

Proposed areas of collaboration:

- **Data integration:** incorporate NASRDA and NigeriaSat Earth-observation data into the platform's crop, flood and land-use intelligence, alongside our existing international sources.
- **Joint demonstration:** a flagship showcase of applied Earth observation for food security and disaster early warning across pilot states.
- **Applications and capacity:** a live reference platform for NASRDA's remote-sensing application

centres and partner agencies.

- **Last-mile impact:** taking space-derived insight all the way to the farmer, through multilingual SMS and partner networks.

This partnership would turn NASRDA's mandate into something the nation can see and feel: a deployed, working example of space technology improving lives and livelihoods. We would be honoured to give you and your technical teams a live demonstration at your convenience, and to explore a data-sharing arrangement and a memorandum of understanding.

Please accept, Dr. Adepoju, the assurances of our highest regard.

Yours faithfully,

A handwritten signature in black ink, appearing to read 'Abdullahi Zuru Ibrahim', with a stylized flourish at the end.
