

EconomicBridge — Executive Brief

A live satellite and AI platform that turns Earth observation into real impact for agriculture, food security and disaster response. Built and operated in Nigeria by Bizra Farms Integrated.

700+ LGAs / districts covered	10 pilot regions live	87.2% AI crop-model accuracy	7 live data feeds
---	---------------------------------	--	-----------------------------

What it does

CropGuard — AI crop-disease diagnosis from a leaf photo, plus satellite vegetation monitoring. **ShockGuard** — flood and drought detection from all-weather radar. **Farmland Protection** — conflict and encroachment early warning, 24 to 72 hours ahead. **Economic Visibility** — poverty and population mapping from space. Plus mobility, education and aid-coordination intelligence. Warnings reach communities by SMS in local languages, no smartphone needed.

Built on

Live data from Copernicus Sentinel-1 and Sentinel-2, NASA, the World Bank, UNICEF and WorldPop; a trained ResNet-50 model plus conflict and anomaly prediction; running on AWS with multi-tenant data isolation and honest live-vs-modelled labelling.

Proposed collaboration with NASRDA

- Integrate **NigeriaSat** imagery and the National Centre for Remote Sensing into the platform's intelligence.
- A flagship **joint demonstration** of applied Earth observation for food security and disaster resilience.
- A live **reference platform** for NASRDA's application centres.
- A path to a **data-sharing memorandum of understanding**.
