

Live Demo Script — NASRDA Meeting

Aim: walk out with a committed next step (technical session / path to a data-sharing MOU). Let the live product do the talking; keep it to ~6 minutes, then listen.

Pre-flight (before you walk in)

- Phone hotspot ON and tested on the live URL (do not trust venue wifi).
- Browser full-screen (F11), logged in as super-admin, Overview + CropGuard tabs pre-loaded.
- Diseased-leaf photo on the laptop, pre-tested so it reads as a disease.
- Pitch deck PDF + demo video saved offline as a fallback.

The walkthrough

- 1. Front door.** SHOW the public site. SAY: "This is EconomicBridge, live and open. Now the operational view."
- 2. Overview.** SHOW the map, pulsing halos, rotating intel. SAY: "447 LGAs, 10 regions, updating from satellites every day."
- 3. CropGuard upload — THE MOMENT.** Upload the leaf. SHOW the diagnosis + the heatmap of where the AI looked. SAY: "Trained ResNet-50, 87% accuracy. Watch the detection register live."
- 4. Vegetation (NDVI).** SHOW the NDVI panel. SAY: "Live Sentinel-2 — we watch every field's health from orbit, no photo needed."
- 5. Farmland + ShockGuard.** SHOW alerts and the flood/drought map. SAY: "Conflict predicted 24 to 72 hours ahead; floods seen through cloud by radar."
- 6. Economic Visibility + SMS.** SHOW poverty mapping and the multilingual SMS panel. SAY: "Down to the settlement, and out to the farmer by SMS in their language."

The ask

"We'd love to bring NigeriaSat data into this, run a joint demonstration, and explore a data-sharing MOU. What would be most useful to your teams?" — then **listen and take notes**.

If the internet fails

Switch to the pitch deck / video without apology. Say: "I'll send your team the live link to explore afterwards." Never let a connection issue stall the conversation.
