The Director-General
National Emergency Management Agency (NEMA)
National Headquarters, No. 8 Adetokunbo Ademola Crescent
Maitama, Abuja, Nigeria

PROPOSAL FOR PARTNERSHIP: DEPLOYMENT OF THE ECONOMICBRIDGE SATELLITE INTELLIGENCE PLATFORM FOR DISASTER EARLY WARNING, RESPONSE TARGETING, AND RESILIENCE PLANNING

Dear Madam,

On behalf of **Bizra Farms Integrated Nigeria Limited**, I write to propose a strategic partnership with the National Emergency Management Agency. We build and operate satellite and AI intelligence systems that turn live earth observation data into early warnings and decision support for government, and we would like to place that capability at the service of NEMA's disaster management mandate.

EconomicBridge is a multi tenant satellite intelligence platform, live on secure cloud infrastructure, that gives decision makers a real time, local government level picture of conditions across the country. It draws on live data from the European Copernicus (Sentinel-1 and Sentinel-2) satellites, NASA, the World Bank and UNICEF, currently covering over 700 local government areas across Nigeria and neighbouring ECOWAS states. It is designed to scale to all 36 states and the FCT.

EconomicBridge is designed to complement, not replace, the Agency's existing forecasting sources such as NIMET and NIHSA. Where those provide weather and flood forecasts, EconomicBridge adds live satellite observation of actual ground conditions and ties every hazard to the affected population, giving NEMA forecast, reality and response targeting in a single picture.

The proposed project. We will activate a dedicated, secure national account for NEMA, configured for the Agency's mandate, and work with your nominated officers over an initial pilot period to embed the platform into your early warning and response workflows. This is offered at no cost during the pilot, with NEMA's data visible only to your team. Beyond the pilot, we anticipate transitioning to a subscription arrangement by mutual agreement.

What the platform delivers for NEMA:

- **Live flood & drought observation (ShockGuard):** Sentinel-1 radar confirms actual flood extent on the ground, through cloud cover day or night, turning a forecast into a verified, mapped picture for response.
- **Active fire monitoring:** daily NASA FIRMS detections of bush and wildfire across the country.

- **Conflict & displacement early warning:** 24 to 72 hour prediction of farmer/herder and encroachment flashpoints that drive population displacement.
- **Population & vulnerability mapping:** settlement level population and poverty intensity from nightlight and population satellite data, to target relief where need is greatest.
- **Relief coordination:** a shared view of agency coverage to reduce duplication and close gaps.
- **National oversight:** a single nationwide dashboard matching NEMA's federal mandate, with automated monthly situation reports.

And beyond response. Because the platform also monitors agriculture, food security, livelihoods and education access, it supports NEMA's wider role in disaster *risk reduction* and post disaster recovery. Our registration free, multilingual SMS alerting can also reach affected communities directly through partner agencies, including citizens without smartphones.

We would be honoured to give your team a live demonstration at your convenience and to discuss how EconomicBridge can strengthen the Agency's operations. Kindly nominate one or two officers as points of contact, and we will activate NEMA's account and provide guided onboarding immediately.

Please accept the assurances of our highest regard.

Yours faithfully,

Abdullahi Zuru Ibrahim
