

EconomicBridge — Commercial Pricing Sheet

Bizra Farms Integrated Nigeria Ltd · July 2026 · All prices in USD

Confidential — negotiation baseline. NGN equivalents indicative at ₦1,550/\$.

1. Market context (why these prices)

The global Earth-Observation (EO) data & analytics market is worth **~\$4–5 billion (2024)** and growing at **15–20% per year**, with the fastest growth in *downstream analytics* — turning imagery into decisions — precisely EconomicBridge's layer. Comparable pricing worldwide:

Comparable	Typical government price point
International EO analytics SaaS (Planet-partner analytics, agri-monitoring platforms)	\$50,000–\$500,000+/yr per government client
Global satellite-monitoring dashboards for a single ministry	\$100,000–\$1M/yr
Consulting-built one-off EO studies	\$50,000–\$250,000 per study

EconomicBridge's advantage: **local-first, multi-module, sovereign-friendly, and 30–70% below international vendors** — while covering seven decision domains (poverty, aid, farmland protection, crop health, disaster, mobility, skills) in one platform, per-LGA, with auditable satellite provenance (Sentinel-1/2, NASA FIRMS, VIIRS Black Marble, WorldPop).

2. Platform subscriptions (annual licence)

Tier	Scope	USD / year	≈ NGN / year
State Starter	1 state, 2 modules, 5 seats, standard alerts	\$15,000	₦23M
State Professional	1 state, all 7 modules, 15 seats, email alert digests, historical reports + CSV/PDF export	\$36,000	₦56M
Agency / Parastatal	Duty-scoped modules (e.g. NEMA → ShockGuard + Farmland) across all pilot states , 25 seats, priority alerts	\$60,000	₦93M
Federal Enterprise	Nationwide (36 states + FCT), all modules, API access, dedicated support, 99.5% SLA, quarterly briefings	\$150,000–\$300,000	₦232–465M
ECOWAS Country Deployment	Full-country tenant (new ROI ingestion + calibration included)	from \$100,000	₦155M+

All tiers include: live satellite ingestion, per-LGA coverage, provenance panel, multilingual SMS-ready farmer alerts (gateway costs pass-through), and platform updates.

3. Add-on revenue lines

Product	Price (USD)	Notes
Data / API feed (per indicator stream: encroachment, crop health, flood/drought, night-lights)	\$12,000/yr per feed	Pipes into the client's own systems
Alert subscription service (agency email/SMS digests without dashboard seats)	\$6,000/yr per agency	Entry product; upsell path to Agency tier
Bespoke assessment report (e.g. "Encroachment audit, Kebbi Q3")	\$2,500–\$10,000 each	2–4 week turnaround

Product	Price (USD)	Notes
Professional services (integration, training, capacity-building)	\$800/day	Often donor-fundable
Donor-funded deployment (WFP / World Bank / EU program)	\$80,000–\$150,000 per program + 20% annual O&M	Non-dilutive scaling route

4. Standard commercial terms

- **Billing:** annual in advance (government POs: 50% on signature, 50% at go-live acceptance, net-30).
- **Pilot pricing:** 3-month paid pilot at 25% of annual tier price, creditable against year-1 licence.
- **Multi-year:** 10% discount on 2-yr, 15% on 3-yr prepaid.
- **Public-sector escalation:** prices reviewed annually; capped at US CPI + 3%.
- **What's never discounted to zero:** ingestion compute + SMS pass-through costs.

5. Indicative value anchors (for negotiation)

- One prevented farmer–herder clash: conflict losses in Nigeria's middle belt are estimated in **billions of USD annually** — a \$36k state licence is <0.01% of one state's exposure.
- One pre-positioned flood response (48–72h early warning): saves multiples of the licence in emergency logistics alone.
- Crop-stress early warning across 447 LGAs replaces field-survey costs that exceed **\$1M/yr** at national scale.

This sheet is a commercial baseline, not an offer. Final pricing per signed agreement. Bizra Farms Integrated Nigeria Ltd — operator of EconomicBridge — <https://economicbridge.org> · info@economicbridge.org
