

BIZRA FARMS INTEGRATED NIGERIA LIMITED

(RC 1929412)

Live Demo Script — NASRDA Meeting

Aim: walk out with a committed next step, a one-state data pilot (Benue) and a path to a data-sharing MOU. Let the live product do the talking; keep it to five minutes, then listen.

Pre-flight (before you walk in)

- Phone hotspot ON and tested on economicbridge.org (do not trust venue wifi).
- Browser full-screen (F11), logged in as super-admin, Overview and Farmland Protection on Kebbi pre-loaded.
- Screenshots of the Ngaski and Maiyama detections and the pitch deck PDF saved offline as a fallback.
- CropGuard only if asked, on a laboratory image pre-tested so it reads as a disease. Never test on a leaf handed to you in the room: the model is validated on laboratory images, not field photographs.

The walkthrough

1. Overview (0:00). SHOW the live map. SAY: "Live and multi-tenant: 142 LGAs across eight Nigerian pilot territories, read from open Copernicus and NASA data."

2. Farmland Protection, Kebbi (0:30). SHOW Ngaski or Maiyama. SAY: "Each of these is a separate patch at its own coordinates, eleven in Ngaski alone, not one pin at the centre. This one greened in 2024 and 2025 and stayed bare through this year's rains."

3. The accuracy question (2:00). SAY: "Before you ask how often it is right: 64% on a random sample, checked by eye against before-and-after imagery. We tested a looser rule; it scored 2 in 55, so we don't ship it."

4. ShockGuard (3:00). SHOW the storm map. SAY: "Storms rebuilt from half-hourly NASA rainfall, filed by the day the rain actually fell. We tested flood detection against the 2024 Kebbi floods and it did not detect them, so we do not claim it."

5. Rainfall advisories (4:00). SAY: "Every morning each Kebbi LGA's rainfall is checked against its own history. When it crosses the extreme threshold, farmer cooperative leaders get an SMS in Hausa, automatically, with no one in the loop."

The ask (4:30)

"Where we need NASRDA is the cloudy south and the ground truth. Could we agree a one-state data pilot, Benue, and a path to a data-sharing MOU? What would be most useful to your teams?" Then **listen and take notes**.

If the internet fails

Switch to the saved screenshots and deck without apology. Say: "I'll send your team the live link to explore afterwards." Never let a connection issue stall the conversation.
