

BIZRA FARMS INTEGRATED NIGERIA LIMITED

(RC 1929412)

EconomicBridge in the Earth-Observation Landscape

EconomicBridge competes on the applied-intelligence and last-mile layer over open Copernicus/NASA data — turning satellite data into decisions and alerts that reach the farmer. Compared with the major EO providers:

Capability	Economic Bridge	Planet / Maxar	EOS / Farmonaut	Digital Earth Africa
AI crop-disease diagnosis (from a leaf photo)	🟡	✗	✗	✗
Satellite crop / vegetation monitoring (NDVI)	✓	✓	✓	✓
Flood & drought early warning	🟡	✓	✗	✓
Farmer-herder conflict & encroachment warning	✓	✗	✗	✗
Poverty & population mapping	✓	🟡	✗	🟡
Aid-coordination & multi-agency coverage	🟡	✗	✗	✗
Unified multi-domain platform (ag + disaster + economy)	✓	✗	✗	🟡
Last-mile SMS alerts to farmers, local languages	✓	✗	✗	✗
Honest live-vs-modelled data labelling	✓	✗	✗	✗
Built for West-African governments (multi-tenant)	✓	🟡	🟡	🟡
Owens a satellite constellation (imagery source)	✗	✓	✗	✗

✓ full 🟡 partial ✗ none. EconomicBridge's partial marks are its own measurement: the crop-disease model is validated on laboratory images and awaits field validation, the platform reports storms and extreme rainfall rather than floods, and its aid-coordination feed holds no records for the pilot states yet. EconomicBridge does not own satellites; national space assets such as NASRDA's NigeriaSat and NCRS archives are its natural complement, not a competitor.
